Rattler Bar Dispenser Valve Retainer Clip

Part Number 265-0759 Retainer, Clip ¼" Fitting has been revised. This revision was implemented as a running change for all Rattler Bar Dispensers and service parts. There are two distinguishing cosmetic features resulting from this change. An extra pull tab on top and a detent on both sides were added, see photo below.

NOTE:

This change was phased into production starting with serial # PBD 150420-001 .
It is highly recommended that all installations use the base plate for stability and valve cover for cleanliness included with each Rattler Bar Gun.

Some sub-optimal installations may require the use of the new retainer clip. The procedure below should be followed in order to properly remove and replace retainer clips.

Remove old retainer by twisting side to side while pulling upwards.
Note: Pliers may be used to remove retainer, however, be cautious not to damage valve body.

Install new retainer clip with the larger tab facing towards the outside of the valve
