

component change notice: pressure gauges

tech bulletin

Effective April 2, 2018

Dear Valued Customer,

Over the coming months, Taprite will be enacting a running change in the pressure gauges used on and with our regulators. The new versions of our gauges will not only help us to standardize our product across domestic and international markets, but improve the quality and consistency of the products you receive. These gauges are UL 252A Approved, just like the models you are already using. They also feature:

- 50mm cases with fixed polycarbonate lenses for greater durability
- Blow-out back safety cases for added protection in overpressure situations
- Improved accuracy for better results reliability

NOTE:

During our inventory transition, you may see your orders for current gauge part numbers amended to feature the part new numbers below. Current and new versions will not be mixed on any regulators you purchase or receive.

Current Part	Item Description	New Model
5602	30psi Gauge, Right Hand Threads, Bottom Inlet	39-0030-00
624	60psi Gauge, Right Hand Threads, Bottom Inlet	39-0060-00
624-2	90psi Gauge, Right Hand Threads, Bottom Inlet	39-0090-00
624-1	100psi Gauge, Right Hand Threads, Bottom Inlet	39-0100-00
5605	160psi Gauge, Right Hand Threads, Bottom Inlet	39-0160-00
6603-2000	2000psi Gauge, Left Hand Threads, Right Inlet	39-2000-10
6603	3000psi Gauge, Left Hand Threads, Right Inlet	39-3000-10
5603	3000psi Gauge, Right Hand Threads, Right Inlet	39-3000-00

We appreciate the opportunity to work with and for you and thank you for your continued loyalty and support of the Taprite Brand.
